

ABSTRACT OF THE DISCLOSURE

A hydraulic reel adapted for attachment to a skid steer (hydraulic reel) includes a base frame, a reel frame, a reel, and a hydraulic motor. One end of the base frame is mounted to a quick mount member of the skid steer and the reel frame is pivotally attached to other end thereof. The reel includes an axle which is rotably retained by the reel frame. A hydraulic motor drives the reel. A rotary union is attached to an open end of the axle and a hose is secured to the other end of the axle. The hose is routed through an opening in the reel. Pressurized hydraulic fluid is taken from the skid steer hydraulic system to operate the hydraulic motor. The hydraulic reel may be moved wherever desired with the skid steer.
